

We offer a variety of quartz glass plates and discs in various dimension and material grade. Electric fused type plates are the most cost efficient material for many applications. Flame fused type plates are cut from ingot which are produced in flame fusion process. Synthetic quartz plates are made from synthetic ingot. It has high performance in chemical purity and optical transmission. Opaque quartz plate, disc and ring are available which are excellent thermal shielding material and are used in heat insulation and chemical applications.

We provide tailor cut plates and discs with different optical qualities and surface finishing process:

- Optical polished
- mechanical polished
- flame polished
- grinded
